Calicut University Bsc Mathematics

Projects

Tokyu Reservation

05/23 - present

- Tokyu Hotel Reservation in Subscription based Web Application is a project portfolio that allows users to reserve and book hotel rooms in the Tokyu Hotel chain. It includes an intuitive user-interface, an easy checkout process, and a secure payment system. The platform also features a loyalty program, providing discounts and other benefits to frequent guests. The application also allows for real-time room availability monitoring, ensuring customers can always find the best deals.

SurveyDB

04/21 - present

- Survey DB system features creation and distribution of survey templates for users from different organizations. The system imports AIRs surveys from SUNA-BA which can be used as reference for quickly creating a template. The surveys and questions can be searched in the imported surveys which can be added to new or existing templates. The surveys accessible to a user depend on the organization which the user belongs to. After creating a template a user can export the same in supported format. Also a user can share the template to other users. Users can access or manage different modules of the system as per the role assigned to a user. The reporting feature of the system enables the user to

report questions to the administrator to block the same from being used with templates created in the survey DB system.

Buddy Management

06/22 - 01/23

- The Buddy Management System comprises the resources in the company, which include admin, managers, trainers, trainees, and mentors. The web application mainly focuses on managing trainees in the company. The application is for organizing training and creating tasks within the training.

QCSV

04/21 - 05/23

- QC-SV is used to generate QC4, GT.xlsx, Questionnaire.xlsx [classic & standard] files. The system also Zip these output files with a provider set password on demand. This system is used by specific providers to create output files using their survey data. The whole system access is restricted within AWS VPC (Virtual Private Network) network. All the providers should use AWS services to access the system.

Acheivments

- Employee of the year 2023.
